CONTENTS

Introduction vii

Contents xv

Chapter 1 Mathematical analysis of cellular automata

Aperiodicity in one-dimensional cellular automata
E. Jen 3

Cyclic cellular automata and related processes
R. Fisch 19

Nearest neighbor cellular automata over Z_2 with periodic boundary conditions
B. Voorhees 26

Cellular automata and multifractals: Dimension spectra of linear cellular automata
S. Takahashi 36

A cellular automaton ruled by an eccentric conservation law
A.M. Barbé 49

Boolean derivatives on cellular automata
G. Vichniac 63

Chapter 2 Structure of the space of cellular automata

Transition phenomena in cellular automata rule space
W. Li, N.H. Packard and C.G. Langton 77

Is there a sharp phase transition for deterministic cellular automata?
W.W. Wootters and C.G. Langton 95

Wolfram's class IV automata and a good Life
H.V. McIntosh 105

Criticality in cellular automata
H. Chaté and P. Manneville 122

A hierarchical classification of cellular automata
H.A. Gutowitz 136

Chapter 3 Learning rules with specified properties

Adaptive stochastic cellular automata: Theory
Y.C. Lee, S. Qian, R.D. Jones, C.W. Barnes, G.W. Flake, M.K. O'Rourke, K. Lee, H.H. Chen, G.Z. Sun, Y.Q. Zhang, D. Chen and C.L. Giles 159

Adaptive stochastic cellular automata: Experiment
S. Qian, Y.C. Lee, R.D. Jones, C.W. Barnes, G.W. Flake, M.K. O'Rourke, K. Lee, H.H. Chen, G.Z. Sun, Y.Q. Zhang, D. Chen and C.L. Giles 181

Extracting cellular automaton rules directly from experimental data
F.C. Richards, T.P. Meyer and N.H. Packard 189

Chapter 4 Cellular automata and the natural sciences

Biology

What can automaton theory tell us about the brain?
J.D. Victor 205

Simulation of HIV-infection in artificial immune systems
H. Sieburg, H. McCutchan, O. Clay, L. Caballero and J. Ostlund 208

Physics and chemistry

Invertible cellular automata: A review
T. Toffoli and N. Margolus 229

Digital mechanics: An informational process based on reversible universal cellular automata
E. Fredkin 254

Representations of geometrical and topological quantities in cellular automata
M.A. Smith 271

Relaxation properties of elementary reversible cellular automata
S. Takesue 278

A comparison of spin exchange and cellular automaton models for diffusion-controlled reactions
A. Canning and M. Droz 285

Reversible cellular automata and chemical turbulence
H. Hartman and P. Tamayo 293

Soliton turbulence in one-dimensional cellular automata
Y. Aizawa, I. Nishikawa and K. Kaneko 307

Knot invariants and cellular automata
B. Hasslacher and D.A. Meyer 328

Critical dynamics of one-dimensional irreversible systems
O. Martin 345

Chapter 5 Computation theory of cellular automata

Computation theoretic aspects of cellular automata
K. Culik II, L.P. Hurd and S. Yu 357

Reversibility of 2D cellular automata is undecidable
J. Kari 379

Classifying circular cellular automata
K. Sutner 386

Formal languages and global cellular automaton behavior
K. Culik II, L.P. Hurd and S. Yu 396

A characterization of constant-time cellular automata computation
S. Kim and R. McCloskey 404

Constructive chaos by cellular automata and possible sources of an arrow of time
K. Svozil 420

Chapter 6 Generalizations of cellular automata

Cellular automata and discrete neural networks
M. Garzon 431

Attractor dominance patterns in sparsely connected Boolean nets
C.C. Walker 441

Periodic orbits and long transients in coupled map lattices
R. Livi, G. Martínez-Mekler and S. Ruffo 452

Appendices

Appendix I: A brief review of cellular automata packages
D. Hiebeler 463

Appendix II: Maps of recent cellular automata and lattice gas automata literature
H.A. Gutowitz 477
